IMPORTANT NOTICE FOR PIONEER DMH-WT600NEX WHEN USING WIRED REMOTE ADAPTER

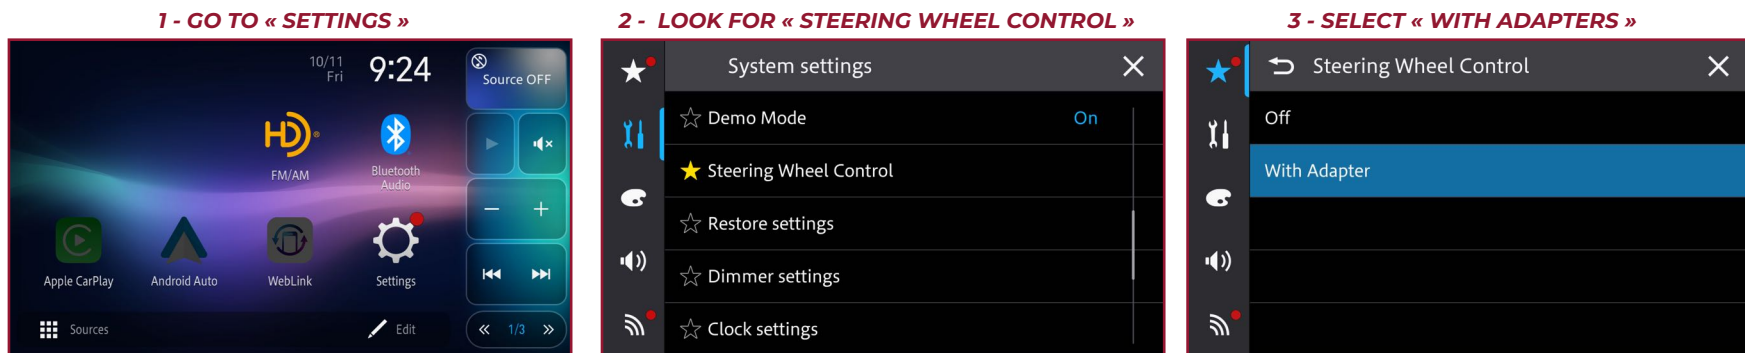

Please note the following and important change on our Pioneer DMH-WT600NEX and its use with a wired remote control interface (Steering wheel control).

IF USING THIS
« W/R » INPUT

When using a *stand-alone* steering wheel interface connected to our **DMH-WT600NEX** via the « **W/R INPUT**» jack (Wired Remote Input), **you must now enable the communication** which is by default set to «OFF».

The activation of this W/R INPUT is available under the system configuration menu.

* This does not apply to any 4-pin data-bus interface (iDatalink Maestro RR or Metra Axxess).
